

AUC_30: area under the temperature curve over 30 minutes
Maxtemp_30: maximal temperature over 30 minutes
age: age at time of operation
sex: gender (0=male, 1=female)
length: length (in cm)
weight: weight (in kg)
optime: operation time (minutes)
TRNT: time to removal of nasogastric tube (days)
WBC_postop: leucocyte count one day after operation
AST_postop: AST level one day after operation
ALT_postop: ALT level one day after operation
GGT_postop: GGT level one day after operation
ICU: stay on intensive care unit (days)
hospstay: total hospital stay (days)
dead: 1= dead, 0 = censored
vitaldat: date of dead or censoring (days since January 1, 1960)
survival: days between operation and dead
anastomoses: number of anastomoses
diagnosis: 4=colorectal origin; 3= ovarian origin; 2= pseudomyxoma peritonei; else=1
operationdat= date of operation (days since January 1, 1960)
